"Our vision is to become a leading provider of integrated building services design, engineering and project management. We aim to add value to our client's through our expertise, innovation and professional approach." - Mark Cramp (Director)

Our success has been achieved by offering our client's:

- § Integrated electrical and mechanical building services design teams
- § Competent well qualified engineers with valuable expertise
- § A flexible quality service from feasibility through to hand over
- § A world class design and project management service
- § Delivering our products on time every time and within budget
- § Value for money

Energi Consulting Services Ltd are enthusiastic about developing cost effective, innovative sustainable energy efficient solutions for our client's. Our sustainable building services solutions not only reduce the carbon dioxide (CO₂) emissions or carbon footprint of buildings, they will also reduce the overall running costs.

We are CIBSE accredited Energy Assessors and Low Carbon Consultants so in addition to offering traditional building services consulting services we can provide energy audits, Energy Performance Certificates (EPC) and Display Energy Certificates (DEC).

We are Constructionline registered and our current client's include local councils, Architects, Property Developers, Nottinghamshire NHS Trust, main contractors, building services consultants and M&E contractors. We continue to receive repeat business from key clients and we feel that this emphasizes our commitment to the quality of our services.

Our website www.energiconsulting.co.uk has lots of useful information and news items on it relating to the latest issues, developments and design guides for low carbon and low energy building services design.
